The idealized Matrix would have a narrower focus and less of a desire to present long, boring levels; put the guns away, focus on a killer hand-to-hand combat system. Instead, you get minor characters beating up rent-a-cops in a warehouse or a sewer. Judged on its own, Enter the Matrix is a decidedly mediocre game.

This futuristic science fiction book deals with the Earth during the year 2525 A.D. The earth and its inhabitants have under gone a continued process of transformation leading toward evolution.

Spiritual development occurs from within a person, and demands the awakening of a life's conscience. This conscience starts with a duality, in which we don't allow ourselves to stay permanently in one of the two poles, as many people, deluded by materiality tend to do. In other words, we can only ascend beyond the material sphere of life when we gain conscience of both the good and bad that life has to offer, but also the relation between both in our growth. There are many paths possible to gain such awareness, but they demand the acknowledgment of emptiness and the detachment from ego. This can be exercised with proper meditation and a conscious existence. As the perspective about life increases in perceptions and awareness, the duality within is also accepted. In this universe, the individual is both a receiver and seeker, passive and active, restless and comforted, because he can see the physical world as it is, and deny it at the same time. However, before anyone reaches the final stage, commonly known as enlightenment, there are others which are necessary to study and acknowledge. The purpose of this book is to describe them, so that anyone may know how to experience a more spiritual existence.

Develops a theory of contemporary culture that relies on displacing economic notions of cultural production with notions of cultural expenditure. This book represents an effort to rethink cultural theory from the perspective of a concept of cultural materialism, one that radically redefines postmodern formulations of the body.
