Panther geckos (*Paroedura pictus*) are popular exotic pets thanks to their interesting markings and ease of care. Also known as the Madagascar ground gecko, this species hails from the island of Madagascar and is often found in the leaf litter of forests. Panther geckos

are predominantly brown with black markings and big eyes. And they have a healthy appetite for crickets. They generally do well in captivity when given the proper environment, though they are typically quite timid and prefer not to be handled. These small geckos not only are known for their beautiful patterns but also for their interesting personalities. Juveniles can be jumpy but tend to calm down and become docile as they get older. Overall, panther geckos are nocturnal, so they won't be terribly active during the day. Although they're not ideal pets for homes with young children who might want to touch and hold the animal, panther geckos are suitable for first-time lizard owners who can commit to the animal's needs.

These geckos don't respond well to stress. They don't like being handled and will bite as a warning if they feel threatened. (It's usually not much more than a warning bite and won't do much damage.) Panther geckos also can lose their tails when they feel stressed. The tail will regenerate eventually, though it will look different.

Get your one-stop guide for understanding and raising this popular pet lizard. Reptiles are now kept in one out of every seven pet homes, so it's no surprise that millions have gone gaga for geckos. This fun, easy-to-follow guide provides the scoop on caring for these colorful, gentle creatures, with savvy tips on

geckos are currently classified under the family Eublepharidae because of the regular contrasts that they have between the eublepharids and gekkonids. They have moveable eyelids, with an absence of extended toepads. These are among the most striking anatomical highlights of this gecko that separates it from the standard wall climbing geckos.
