- The governing pattern of a culture; the master story; past monocultures; the monoculture of the early 21st century. 2. The One Story - Your personal mythology; the larger stories of the culture; six cultural stories in society; the assumptions of the master story that shape who we are, what the world is like, and how we and the world interact.

Monoculture: How One Story Is Changing Everything: Amazon ...
Monoculture refers to the effect that this master story has on culture: "one narrative in society that takes over the others, shrinking diversity and forming a monoculture." The author argues that values such as truth, beauty, justice, and freed I think the premise of the book is much more intriguing than the actual read.

Monoculture: How One Story is Changing Everything by F.S ...
In Monoculture, F.S. Michaels draws on extensive research and makes surprising connections among disciplines to take a big-picture look at how one story is changing everything: corporations, corporate social responsibility, and business ethics; families, communities, social services, and philanthropy; nature and biodiversity; government, the public and private sectors, prisons, and public libraries; health care and medicine; religion, Christianity and churches; education, universities, and ...

Monoculture: How One Story is Changing Everything eBook: F ...
the monoculture is economic is that the master story is all about money — how to get it, make more of it, spend it, grow it, or keep it, whether that looks like consumerism, commercialism, or materialism. But that's only true of the economic monoculture at a surface level. Though the monoculture naturally embodies issues surrounding money,

Winner of the 2011 George Orwell Award. One of The Atlantic's top psychology books of 2011. As human beings, we've always told stories: stories about who we are, where we come from, and where we're going. Now imagine that one of those stories is taking over the others, narrowing our diversity and creating a monoculture. Because of the rise of the economic story, six areas of your world - your work, your relationships with others and the environment, your community, your physical and spiritual health, your education, and your creativity - are changing, or have already changed, in subtle and not-so-subtle ways. And because how you think shapes how you act, the monoculture isn't just changing your mind - it's changing your life. In Monoculture, F.S. Michaels draws on extensive research and makes surprising connections among disciplines to take a big-picture look at how one story is changing everything. Her research and writing have been supported by the Social Sciences and Humanities Research Council of Canada, the Killam Trusts, and regional and municipal arts councils. Michaels has an MBA, and lives and writes in British Columbia.

Vandana Shiva has established herself as a leading independent thinker and voice for the South in that critically important nexus where questions of development strategy, the environment and the posititon of women in society coincide. In this new volume, she brings together her thinking on the protection of biodiversity, the implications of biotechnology, and the consequences for agriculture of the global pre-eminence of Western-style scientific knowledge. In lucid and accessible fashion, she examines the current threats to the planet's biodiversity and the environmental and human consequences of its erosion and replacement by monocultural production. She shows how the new Biodiversity Convention has been gravely undermined by a mixture of diplomatic dilution during the process of negotiation and Northern hi-tech interests making money out of the new biotechnologies. She explains what these technologies involve and gives examples of their impact in practice. She questions their claims to improving natural species for the good of all and highlights the ethical and environmental problems posed. Underlying her arguments is the view that the North's particular approach to scientific understanding has led to a system of monoculture in agriculture - a model that is not being foisted on the South, displacing its societies' ecologically sounder, indigenous and age-old experiences of truly sustainable food cultivation, forest management and animal husbandry. This rapidly accelerating process of technology and system transfer is impoverishing huge numbers of people, disrupting the social systems that provide them with security and dignity, and will ultimately result in a sterile planet in both North and South, In a policy intervention of potentially great significance, she calls instead for a halt, at international as well as local level, to the aid and market incentives to both large-scale destruction of habitats where biodiversity thrives and the introduction of centralised, homogenous systems of cultivation.

Short-listed for the Man Booker Prize From the author of Remainder and C (short-listed for the Man Booker Prize), and a winner of the Windham-Campbell Literature Prize, comes Satin Island, an unnerving novel that promises to give us the first and last word on the world—modern, postmodern, whatever world you think you are living in. U., a "corporate anthropologist," is tasked with writing the Great Report, an all-encompassing ethnographic document that would sum up our era. Yet at every turn, he feels himself overwhelmed by the ubiquity of data, lost in buffer zones, wandering through crowds of apparitions, willing them to coalesce into symbols that can be translated into some kind of account that makes sense. As he begins to wonder if the Great Report might remain a shapeless, oozing plasma, his senses are startled awake by a dream of an apocalyptic cityscape. In Satin Island, Tom McCarthy captures—as only he can—the way we experience our world, our efforts to find meaning (or just to stay awake) and discern the narratives we think of as our lives.

One of the most influential and imaginative sci-fi writers turns his attention to London - with dazzling results. 'Part-detective story, part-cultural snapshot . . . all bound by Gibson's pin-sharp prose' Arena _____ Cayce Pollard owes her living to her pathological sensitivity to logos. In London to consult for the world's coolest ad agency, she finds herself catapulted, via her addiction to a mysterious body of fragmentary film footage, uploaded to the Web by a shadowy auteur, into a global quest for this unknown "garage Kubrick". Cayce becomes involved with an eccentric hacker, a vengeful ad executive, a defrocked mathematician, a Tokyo Otaku-coven known as Eye of the Dragon and, eventually, the elusive Kubrick himself. William Gibson's novel is about the eternal mystery of London, the coolest sneakers in the world, and life in (the former) USSR. _____ 'A compelling, humane story with a sympathetic heroine searching for meaning and consolation in a post-everything world' Daily Telegraph 'A big novel, full of bold ideas . . . races along like an expert thriller' GQ 'It's dialogue and characterization will amaze you. A wonderfully detailed, reckless journey of espionage and lies' USA Today 'Electric, profound. Gibson's descriptions of Tokyo, Russia and London are surreally spot-on' Financial Times

An unsettling journey into the United States' disaster-bound food system, and an exploration of possible solutions, from leading food politics commentator and farmer-turned-journalist Tom Philpott. More than a decade after Michael Pollan's game-changing The Omnivore's Dilemma transformed the conversation about what we eat, a combination of global diet trends and corporate interests have put American agriculture into a state of "quiet emergency," from dangerous drought in California--which grows more than fifty percent of the fruits and vegetables we eat--to catastrophic topsoil loss in the "breadbasket" heartland of the United States. Whether or not we take heed, these urgent crises of industrial agriculture will define our future. In Perilous Bounty, veteran journalist and former farmer Tom Philpott explores and exposes the small handful of seed and pesticide corporations, investment funds, and magnates who benefit from the trends that imperil us, with on-the-ground dispatches featuring the scientists documenting the damage and the farmers and activists who are valiantly and inventively pushing back. Resource scarcity looms on the horizon, but rather than pointing us toward an inevitable doomsday, Philpott shows how the entire wayward ship of American agriculture could be routed away from its path to disaster. He profiles the farmers and communities in the nation's two key growing regions developing resilient, soil-building, water-smart farming practices, and readying for the climate shocks that are already upon us; and he explains how we can help move these methods from the margins to the mainstream.

A Fast Food Nation for the foods we grow and depend on The bananas we eat today aren't your parents' bananas: We eat a recognizable, consistent breakfast fruit that was standardized in the 1960s from dozens into one basic banana. But because of that, the banana we love is dangerously susceptible to a pathogen that might wipe them out. That's the story of our food today: Modern science has brought us produce in perpetual abundance-once-rare fruits are seemingly never out of season, and we breed and clone the hardiest, best-tasting varieties of the crops we rely on most. As a result, a smaller proportion of people on earth go hungry today than at any other moment in the last thousand years, and the streamlining of our food supply guarantees that the food we buy, from bananas to coffee to wheat, tastes the same every single time. Our corporate food system has nearly perfected the process of turning sunlight, water and nutrients into food. But our crops themselves remain susceptible to the nature's fury. And nature always wins. Authoritative, urgent, and filled with fascinating heroes and villains from around the world, Never Out of Season is the story of the crops we depend on most and the scientists racing to preserve the diversity of life, in order to save our food supply, and us.

A New York Times Book Review Editors' Choice "Extremely wide-ranging and well researched . . . In a tradition of protest literature rooted more in William Blake than in Marx." —Adam Gopnik, The New Yorker The epic story of how coffee connected and divided the modern world Coffee is an indispensable part of daily life for billions of people around the world. But few coffee drinkers know this story. It centers on the volcanic highlands of El Salvador, where James Hill, born in the slums of Manchester, England, founded one of the world's great coffee dynasties at the turn of the twentieth century. Adapting the innovations of the Industrial Revolution to plantation agriculture, Hill helped turn El Salvador into perhaps the most intensive monoculture in modern history—a place of extraordinary productivity, inequality, and violence. In the process, both El Salvador and the United States earned the nickname "Coffeeland," but for starkly different reasons, and with consequences that reach into the present. Provoking a reconsideration of what it means to be connected to faraway people and places, Coffeeland tells the hidden and surprising story of one of the most valuable commodities in the history of global capitalism.

The book that helped make Michael Pollan, the New York Times bestselling author of How to Change Your Mind, Cooked and The Omnivore's Dilemma, one of the most trusted food experts in America Every schoolchild learns about the mutually beneficial dance of honeybees and flowers: The bee collects nectar and pollen to make honey and, in the process, spreads the flowers' genes far and wide. In The Botany of Desire, Michael Pollan ingeniously demonstrates how people and domesticated plants have formed a similarly reciprocal relationship. He masterfully links four fundamental human desires—sweetness, beauty, intoxication, and control—with the plants that satisfy them: the apple, the tulip, marijuana, and the potato. In telling the stories of four familiar species, Pollan illustrates how the plants have evolved to satisfy humankind's most basic yearnings. And just as we've benefited from these plants, we have also done well by them. So who is really domesticating whom?

"Epic and engrossing." —The New York Times Book Review From the #1 New York Times bestselling author and pioneering journalist, an expansive look at how history has been shaped by humanity's appetite for food, farmland, and the money behind it all—and how a better future is within reach. The story of humankind is usually told as one of technological innovation and economic influence—of arrowheads and atomic bombs, settlers and stock markets. But behind it all, there is an even more fundamental driver: Food. In Animal, Vegetable, Junk, trusted food authority Mark Bittman offers a panoramic view of how the frenzy for food has driven human history to some of its most catastrophic moments, from slavery and colonialism to famine and genocide—and to our current moment, wherein Big Food exacerbates climate change, plunders our planet, and sickens its people. Even still, Bittman refuses to concede that the battle is lost, pointing to activists, workers, and governments around the world who are choosing well-being over corporate greed and gluttony, and fighting to free society from Big Food's grip. Sweeping, impassioned, and ultimately full of hope, Animal, Vegetable, Junk reveals not only how food has shaped our past, but also how we can transform it to reclaim our future.

Debunking the notion that our current food crisis must be addressed through industrial agriculture and genetic modification, author and activist Vandana Shiva argues that those forces are in fact the ones responsible for the hunger problem in the first place. Who Really Feeds the World? is a powerful manifesto calling for agricultural justice and genuine sustainability, drawing upon Shiva's thirty years of research and accomplishments in the field. Instead of relying on genetic modification and large-scale monocropping to solve the world's food crisis, she proposes that we look to agroecology—the knowledge of the interconnectedness that creates food—as a truly life-giving alternative to the industrial paradigm. Shiva succinctly and eloquently lays out the networks of people and processes that feed the world, exploring issues of diversity, the needs of small famers, the importance of seed saving, the movement toward localization, and the role of women in producing the world's food.
