This book argues for a reframing of environmental law. It starts from the premise that all environmental issues confront lawmakers as emergencies. Environmental issues pose a fundamental challenge to law because it is impossible to reliably predict which issues contain the possibility of an emergency and what to do in response to such an unforeseen event. These features undermine the conventional understanding of the rule of law. This book argues that approaching environmental issues from the emergency perspective leads us to an understanding of the rule of law that requires public justification. This requirement recentres the debates in environmental law around the question of why governance under

the rule of law is something worth having in the environmental context. It elaborates what the rule of law requires of decision-makers in light of our ever-present vulnerability to catastrophic environmental harm. Controversial, compelling and above all timely, this book presents an important new perspective on environmental law.

About the Book: More than 50 years ago, Franklin Kury drafted and championed an Environmental Rights Amendment to the Pennsylvania Constitution, which was enacted on Earth Day 1970 and ratified by Pennsylvania's voters a year later. In the half century since then, climate change has become the overriding threat to the environment of the planet. In this book, Franklin Kury expands upon the story of Article I, Section 27, to demonstrate how its

principles can be the basis for addressing climate change in the rest of the world. The story concludes with a call for the federal government's leadership to seek a national environmental rights amendment to the U.S. Constitution and a treaty to expand its reach to the international community. About the Author: Franklin Kury served in the Pennsylvania House of Representatives from 1966 to 1972 and the Pennsylvania Senate from 1972 to 1980. As a state representative, Kury was the author and lead advocate of the legislative proposal that became the Environmental Rights Amendment to the Pennsylvania Constitution (Article 1, Section 27) that is the basis of this book. After leaving the legislature, Kury was a member of the Board of Directors of the Pennsylvania Environmental Council and Hawk Mountain Sanctuary.

The Ecological Constitution integrates the insights of environmental constitutionalism and ecological law in a concise, engaging and accessible manner. This book sets out the necessary components of any constitution that could be considered "ecological" in nature. In particular, it argues that an ecological constitution is one that codifies the following key principles, at a minimum: the principle of sustainability; intergenerational equity and the public trust doctrine; environmental human rights; rights of nature; the precautionary principle and non-regression; and rights and obligations relating to a healthy climate. In the context of the global environmental crisis that characterises the current Anthropocene era, these principles are important tools for changing consciousness and driving pragmatic policy reforms around the world. Re-imagining constitutions along these lines could play a vital role in the collective project of

The Constitutional Change We Need to Protect Our Priceless Natural Resources For decades, activists have relied on federal and state legislation to fight for a cleaner environment. wonder people feel powerless when it comes to preserving the quality of their water, air, public parks, and special natural spaces. But there is a solution, argues veteran environmentalist Maya K. van Rossum: bypass the laws and turn to the ultimate authority--our state and federal constitutions. In 2013, van Rossum and her team won a watershed legal victory that not only protected Pennsylvania communities from ruthless frackers but affirmed the constitutional right of people in the state to a clean and healthy environment. Following this victory, van Rossum inaugurated the Green Amendment movement, dedicated to empowering every American community to mobilize for constitutional change. Now, with The Green Amendment, van Rossum lays out an inspiring new agenda for environmental advocacy, one that will finally empower people, level the playing field, and provide real hope for communities

everywhere. Readers will discover: - how legislative environmentalism has failed communities across America, - the transformational difference environmental constitutionalism can make, - the economic imperative of environmental constitutionalism, and - how to take action in their communities. We all have the right to pure water, clean air, and a healthy environment. It's time to claim that right--for our own sake and that of future generations.

Canada has abundant natural wealth, beautiful landscapes, vast forests, and thousands of rivers and lakes. The land defines Canadians as a people, yet the country has one of the industrialized world's worst environmental records. Building on his previous book, *The Environmental Rights Revolution* (2012), David R. Boyd

describes how recognizing the constitutional right to a healthy environment could have a transformative impact by empowering citizens, holding governments and industry accountable, and improving Canada's green record. This important and provocative book provides a road map to protect human health, the well-being of the planet, and the interests of future generations.

This book shows why a fundamental right to an adequate environment ought to be provided in the constitution of any modern democratic state. It explains why the right to an environment adequate for one's health and well-being is a genuine human right and why it ought to be constitutionalised.

their relationship with standards of protection globally, nationally and locally.

The right to a healthy environment has been the subject of extensive philosophical debates that revolve around the question: Should rights to clean air, water, and soil be entrenched in law? David Boyd answers this by moving beyond theoretical debates to measure the practical effects of enshrining the right in constitutions. His pioneering analysis of 193 constitutions and the laws and court decisions of more than 100 nations in Europe, Latin America, Asia, and Africa reveals a positive correlation between constitutional protection and stronger environmental laws, smaller ecological footprints, superior environmental performance, and improved quality of life.
