Geography is a system of highly developed sciences about the environment. Geographical science embracing the study of the Earth's physical phenomena, people and their economic activities has always been in need of an extensive terminology. Geographical terms are related to the terms of natural sciences (physics, chemistry, biology, geology, etc.) and humanities (history, economics, sociology, etc.) since geography is based on these fundamental subjects.

Geography includes a number of disciplines and subdivisions which appeared along with the development of the science. In spite of being very different geographical disciplines have some common tools of investigation which are maps, comparative method of exploration, remote sensing, geoinformation systems. Today very well developed terminologies of all the specialist fields of geography and related subjects exist in the main world languages. However, they are not always well-correlated. Nowadays geographical terminology requires unification and international correlation more than ever before. Hence the idea of compiling a multilingual polydisciplinary dictionary. The Dictionary consists of the basic table of terms arranged according to the order of the English alphabet with each term numbered. Each entry consists of the term in English and its equivalents in Russian, French, German, Spanish. Short definitions of terms are given in English and in Russian. The terms are supplied with the necessary grammar labels, such as gender of nouns, plural number, etc. The Dictionary combines two functions: that of a defining dictionary and that of a bilingual dictionary. These two functions are basically contradictory because usually the defining dictionary is aimed at giving one meaning of the word which is the main and essential one, while the bilingual dictionary tries to give different equivalents of a given word in the other language in order to supply the user with maximum possible translations, differing in the shades of meanings, thus giving him the possibility to choose the appropriate word. But in our Dictionary we intentionally decided to combine the two functions – defining and multilingual, because a short definition of the term and equivalents in other languages help to achieve our main aim which consists in showing the basic geographical terminology and harmonizing it in several languages. Having

this into consideration we deliberately mixed two types of dictionaries in one. Organized alphabetically via English Provides short definition of geographical terms in English and Russian Includes multilingual translation of terms from English to Russian, French, German, Spanish

Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.

easily bring mindfulness into everyday life - thereby making it a lot more satisfying and lot less stressful. ” Russ Harris, author of The Happiness Trap · “ One go-to question in mindfulness is: What did you notice? Going through this wonderful book, I noticed how simple and concrete it made the practice of mindfulness. I noticed thoughts about wishing I had come across this book when I first encountered mindfulness some 18 years ago. Then, I noticed warm feelings toward the compassionate humanity of Mike Sinclair, Josie Seydel and Emily Shaw that shines through each page. The next thing I noticed was loving how this new edition delves on self-compassion and offers more on how mindfulness can help us identify, choose and embody our deepest life values. Finally, I noticed the judgment that this book isn ’ t just for busy people, but for anyone interested in living more effectively and learning how to befriend the whole of their experience. ” Benjamin Schoendorff, co-author of The Science of Compassion and The Essential Guide to the ACT Matrix. · “ Fun, engaging and practical - this book is elegantly written by experts to help you learn the skills of mindfulness - and to apply them to this busy, stressful, modern world we live in. ” Dr Joe Oliver, Director of Contextual Consulting and co-author of ACTivate Your Life. · “ Accessible, actionable, insightful and user-friendly. Geography.

In this darkly satirical send-up of academia and the Midwest, we are introduced to Moo University, a distinguished institution devoted to the study of agriculture. Amid cow pastures and waving fields of grain, Moo ' s campus churns with devious plots, mischievous intrigue, lusty liaisons, and academic one-upmanship, Chairman X of the Horticulture Department harbors a secret fantasy to kill the dean; Mrs. Walker, the provost's right hand and campus information queen, knows where all the bodies are buried; Timothy Monahan, associate professor of English, advocates eavesdropping for his creative writing assignments; and Bob Carlson, a sophomore, feeds and maintains his only friend: a hog named Earl Butz. Wonderfully written and masterfully plotted, Moo gives us a wickedly funny slice of life.
