Used 2009 Pontiac G8 for sale in Tampa, FL

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, 'Tess up."

Steers buyers through the the confusion and anxiety of new and used vehicle purchases like no other car-and-truck book on the market. " Dr. Phil, " along with George Iry and the Editors of the Automobile Protection Association, pull no punches.

Steers buyers through the the confusion and anxiety of new and used vehicle purchases like no other car-and-truck book on the market. " Dr. Phil, " along with George Iry and the Editors of the Automobile Protection Association, pull no punches.

A legend in the car industry reveals the philosophy that's starting to turn General Motors around. In 2001, General Motors hired Bob Lutz out of retirement with a mandate to save the company by making great cars again. He launched a war against penny pinching, office politics, turf wars, and risk avoidance. After declaring bankruptcy during the recession of 2008, GM is back on track thanks to its embrace of Lutz's philosophy. When Lutz got into the auto business in the early sixties, CEOs knew that if you captured the public's imagination with great cars, the money would follow. The car guys held sway, and GM dominated with bold, creative leadership and iconic brands like Cadillac, Buick, Pontiac, Oldsmobile, GMC, and Chevrolet. But then GM's leadership began to put their faith in analysis, determined to eliminate the "waste" and "personality worship" of the bygone creative leaders. Management got too smart for its own good. With the bean counters firmly in charge, carmakers (and much of American industry) lost their single-minded focus on product excellence. Decline followed. Lutz's commonsense lessons (with a generous helping of fascinating anecdotes) will inspire readers at any company facing the bean counter analysis-paralysis menace.

Extracting maximum torque and horsepower from engines is an art as well as a science. David Vizard is an engineer and more aptly an engine building artist who guides the reader through all the aspects of power production and high-performance engine building. His proven high-performance engine building methods and techniques are revealed in this all-new edition of How to Build Horsepower. Vizard goes into extreme depth and detail for drawing maximum performance from any automotive engine. The production of power is covered from the most logical point from the air entering the engine all the way to spent gases leaving through the exhaust. Explained is how to optimize all the components in between, such as selecting heads for maximum flow or port heads for superior power output, ideal valvetrain components, realizing the ideal rocker arm ratios for a particular application, secrets for selecting the best cam, and giving unique insight into all facets of cam performance. In addition, he covers how to select and setup superchargers, nitrous oxide, ignition and other vital aspects of high-performance engine building.

The Endangered Species Act (ESA) is a far-reaching law that has sparked intense controversies over the use of public lands, the rights of property owners, and economic versus environmental benefits. In this volume a distinguished committee focusses on the science underlying the ESA and offers recommendations for making the act more effective. The committee provides an overview of what scientists know about extinction--and what this understanding means to implementation of the ESA. Habitat--its destruction, conservation, and fundamental importance to the ESA--is explored in detail. The book analyzes Concepts of species--how the term "species" arose and how it has been interpreted for purposes of the ESA. Conflicts between species when individual species are identified for protection, including several case studies. Assessment of extinction risk and decisions under the ESA--how these decisions can be made more effectively. The book concludes with a look beyond the Endangered Species Act and suggests additional means of biological conservation and ways to reduce conflicts. It will be useful to policymakers, regulators, scientists, natural-resource managers, industry and environmental organizations, and those interested in biological conservation.

This new revised and updated edition is the ultimate buyer's/seller's/user's guide for American automobiles manufactured from 1805 to 1942. With more than 5,000 photos and histories of cars and their companies written by one of America's most respected automotive historians, this is the most extensive automobile reference available.

"Any car maker's greatest asset is their perceived image in the marketplace." Wangers knows what he is talking about, for he was part of the most successful brand marketing campaign to ever come out of Detroit. At a time when such automotive legends as "Bunkie" Knudsen, Pete Estes, and John DeLorean held sway in the Motor City, Jim Wangers created and defined the American musclecar image, devising savvy brand marketing strategies to promote the car that started it all and became a cultural icon: the Pontiac GTO.

Presents the author's picks for the most poorly designed, ill-conceived, and ugly automobiles, including the Yugo GV, the Ford Pinto, the AMC Pacer, the Chevy Chevette, and the DeLorean DMC-12.

"Beyond the Horizons: The Lockheed Story is the story of those turbulent eighty-two years during which Lockheed achieved fantastic successes and endured occasional failures. Lockheed aircraft set innumerable records and were flown by great pioneering aviators such as Amelia Earhart, Wiley Post, and Howard Hughes. Lockheed engineers achieved fame usually reserved for film stars: Men like the great Kelly Johnson and Ben Rich advanced the world of aviation with their genius, and were honored as legends in their own time. Yet the secret of Lockheed lies in the spirit of family that illuminated the corporation over the years and permitted it to gain great triumphs and survive great tragedies. Over eight decades, Lockheed's unique corporate culture has enabled the company to thrive despite fierce competition. Making the right choices in leadership and technology at the right time contributed to their success, and here is the inside story of the people responsible for transforming Lockheed into the most profitable, prestigious, and influential company in the aerospace industry." --
