## Programme Heart Uk

Both Australia and Sweden are economically, socially and politically well-developed countries and each has responded to the Syrian crisis in its own way with features that define refugee children's schooling trajectories for transition to life and work. Syrian Refugee Children in Australia and Sweden provides insights into policies influencing the education and schooling of Syrian refugee children in Australia and Sweden. This book uses the perspectives of Syrian refugee children and their voiced experiences to elicit recommendations for education practices and content. Their voices were central to the analysis for the main reason that their viewpoints could contribute in a practical way to the development of pedagogical approaches that would support their schooling, and an effective and productive transition to life in the host countries. The opinions, suggestions and experiences of other stakeholders such as parents, caregivers, teachers and school and state officials, were included for greater understanding so that as many relevant contexts are covered. The recommendations for refugee education proposed in this book will be useful for teachers, principals and policy makers directly involved in educating refugee students and this could positively impact on young refugee students finding their way to a new and better life.

This book investigates resource-constrained environments in the tropics and subtropics where people's lives and businesses are affected, and adaptations occur periodically. Constrained environments are unique territories characterised by challenging circumstances, limited land and natural resources. They can be places with a small municipal boundary or cities in which parts around them may be consumed by ocean, bay or mountains. Those places face hard physical boundaries like coastlines and mountains, which in addition to policy decisions that may limit height or density, can also serve to limit capacity for expansion. Successful communities and businesses tend to survive in a changing environment given their strong intuitive and forward-looking

# Acces PDF 30th Annual Conference 2016 Programme Heart Uk

adaptations. This book delves into the role of urban planning and design in the promotion of business and adaptations of people and communities. Additionally, the focus takes into account impact analysis and the effects of an expanding populations, including growing migrant flows, and business needs on the built environment of land-constrained territories

Marine mammals attract human interest – sometimes this interest is benign or positive – whale watching, conservation programmes for whales, seals, otters, and efforts to clear beaches of marine debris are seen as proactive steps to support these animals. However, there are many forces operating to affect adversely the lives of whales, seals, manatees, otters and polar bears – and this book explores how the welfare of marine mammals has been affected and how they have adapted, moved, responded and sometimes suffered as a result of the changing marine and human world around them. Marine mammal welfare addresses the welfare effects of marine debris, of human traffic in the oceans, of noise, of hunting, of whale watching and tourism, and of some of the less obvious impacts on marine mammals – on their social structures, on their behaviours and migration, and also of the effects on captivity for animals kept in zoos and aquaria. There is much to think and talk about – how marine mammals respond in a world dramatically influenced by man, how are their social structures affected and how is their welfare impacted?

This volume is the first handbook dedicated to language attrition, the study of how a speaker's language may be affected by crosslinguistic interference and non-use. The effects of language attrition can be felt in all aspects of language knowledge, processing, and production, and can offer unique insights into the mind of bilingual language users. In this book, international experts in the field explore a comprehensive range of topics in language attrition, examining its theoretical implications, psycho- and

# Acces PDF 30th Annual Conference 2016

## Programme Heart Uk

neurolinguistic approaches, linguistic and extralinguistic factors, L2 attrition, and heritage languages. The chapters summarize current research and draw on insights from related fields such as child language development, language contact, language change, pathological developments, and second language acquisition.

Privatisation was introduced into the probation service on the 1st June 2014 whereby work with medium and low risk offenders went to a number of private and voluntary bodies, work with high risk offenders remained with the State. The National Probation Service (NPS) covered State work whilst the 35 existing Probation Trusts were replaced by 21 Community Rehabilitation Companies (CRCs). Staff were allocated to either side of the divide but all remained as probation officers. The effect was that the existing probation service lost control of all but 30,000 of the most high risk cases, with the other 220,000 low to medium risk offenders being farmed out to private firms. Privatisation was justified as the only available way of achieving important policy objectives of extending post release supervision to offenders on short sentences, a group who are the most prolific offenders with high reconviction rates yet who receive no statutory support. This book describes the process by which the probation service became privatised, assessing its impact on the probation service itself, and on the criminal justice system generally. It considers both the justifications for privatisation, as well as the criticisms of it, and asks to what extent the probation service can survive such changes, and what future it has as a service dedicated to the welfare of offenders. It demonstrates how the privatisation of probation can be seen as a trend away from traditional public service in criminal justice towards an emphasis on efficiency and cost effectiveness. This book is essential reading for criminology students engaged with criminal justice, social policy, probation, punishment and working with offenders. It will also be key reading for practitioners and policy makers in jurisdictions where there is an interest in extending their own privatisation

# Acces PDF 30th Annual Conference 2016 Programme Heart Uk

practice.

This book constitutes the proceedings of the 22nd International Conference on Discovery Science, DS 2019, held in Split, Coratia, in October 2019. The 21 full and 19 short papers presented together with 3 abstracts of invited talks in this volume were carefully reviewed and selected from 63 submissions. The scope of the conference includes the development and analysis of methods for discovering scientific knowledge, coming from machine learning, data mining, intelligent data analysis, big data analysis as well as their application in various scientific domains. The papers are organized in the following topical sections: Advanced Machine Learning; Applications; Data and Knowledge Representation; Feature Importance; Interpretable Machine Learning; Networks; Pattern Discovery; and Time Series.

Given the influence of public bureaucracies in policymaking and implementation, Steven J. Balla and William T. Gormley assess their performance using four key perspectives—bounded rationality, principal-agent theory, interest group mobilization, and network theory—to help students develop an analytic framework for evaluating bureaucratic accountability. The new Fourth Edition provides a thorough review of bureaucracy during the Obama and Trump administrations, as well as new attention to state and local level examples and the role of bureaucratic values.

Radiomics and Radiogenomics: Technical Basis and Clinical Applications provides a first summary of the overlapping fields of radiomics and radiogenomics, showcasing how they are being used to evaluate disease characteristics and correlate with treatment response and patient prognosis. It explains the fundamental principles, technical bases, and clinical applications with a focus on oncology. The book's expert authors present computational approaches for extracting imaging features that help to detect and

# Acces PDF 30th Annual Conference 2016 Programme Heart Uk

characterize disease tissues for improving diagnosis, prognosis, and evaluation of therapy response. This book is intended for audiences including imaging scientists, medical physicists, as well as medical professionals and specialists such as diagnostic radiologists, radiation oncologists, and medical oncologists. Features Provides a first complete overview of the technical underpinnings and clinical applications of radiomics and radiogenomics Shows how they are improving diagnostic and prognostic decisions with greater efficacy Discusses the image informatics, quantitative imaging, feature extraction, predictive modeling, software tools, and other key areas Covers applications in oncology and beyond, covering all major disease sites in separate chapters Includes an introduction to basic principles and discussion of emerging research directions with a roadmap to clinical translation

Despite their removal from England's National Curriculum in 1988, and claims of elitism, Latin and Greek are increasingly re-entering the 'mainstream' educational arena. Since 2012, there have been more students in state-maintained schools in England studying classical subjects than in independent schools, and the number of schools offering Classics continues to rise in the state-maintained sector. The teaching and learning of Latin and Greek is not, however, confined to the classroom: community-based learning for adults and children is facilitated in newly established regional Classics hubs in evenings and at weekends, in universities as part of outreach, and even in parks and in prisons. This book investigates the motivations of teachers and learners behind the rise of Classics in the classroom and in communities, and explores ways in which knowledge of classical languages is considered valuable for diverse learners in the 21st century. The role of classical languages within the English educational policy landscape is examined, as new possibilities exist for introducing Latin and Greek into school curricula. The state of Classics education internationally is also investigated, with case studies presenting the status quo in policy

# Acces PDF 30th Annual Conference 2016 Programme Heart Uk

and practice from Australasia, North America, the rest of Europe and worldwide. The priorities for the future of Classics education in these diverse locations are compared and contrasted by the editors, who conjecture what strategies are conducive to success.
