Motoring unmarks the forces that shape the American driving experience—commercial, aesthetic, cultural, mechanical—as it takes a timely look back at our historically unconditional love of motor travel. Focusing on recreational travel between 1900 and 1960, John A. Jakle and Keith A. Sculle cover dozens of topics related to drivers, cars, and highways and explain how they all converge to uphold that illusory notion of release and rejuvenation we call the "open road." Jakle and Sculle have collaborated on five previous books on the history, culture, and landscape of the American road. Here, with an emphasis on the driver's perspective, they discuss garages and gas stations, roadside tourist attractions, freeways and toll roads, truck stops, bus travel, the rise of the convenience store, and much more. All the while, the authors make us think about aspects of driving that are often taken for granted: how, for instance, the many lodging and food options along our highways reinforce the connection between driving and "freedom" and how, by enabling greater speeds, highway engineers helped to stoke motorists' "blessed fantasy of flight." Although driving originally celebrated freedom and touted a common experience, it has increasingly become a highly regulated, isolated activity. The motive behind America's first embrace of the automobile—individual prerogative—still substantially obscures this reality. "Americans did not have the automobile imposed on them," say the authors. Jakle and Sculle ask why some of the early prophetic warnings about our car culture went unheeded and why the arguments of its promoters resonated so persuasively. Today, the automobile is implicated in any number of environmental, even social, problems. As the wisdom of our dependence on automobile travel has come into serious question, reassessment of how we first became that way is more important than ever.

Important Notice: The digital edition of this book may not contain all of the images found in the physical edition.

Includes, beginning Sept. 15, 1954 (and on the 15th of each month, Sept.-May) a special section: School library journal, ISSN 0000-0035, (called Junior Libraries, 1954-May 1961). Also issued separately.

The first part of the book provides a pedagogical introduction to the physics of complex systems driven far from equilibrium. In this part we discuss the basic concepts and theoretical techniques which are commonly used to study classical stochastic transport in systems of interacting driven particles. The analytical techniques include mean-field theories, matrix product ansatz, renormalization group, etc. and the numerical methods are mostly based on computer simulations. In the second part of the book these concepts and techniques are applied not only to vehicular traffic but also to transport and traffic-like phenomena in living systems ranging from collective movements of social insects (for example, ants) on trails to intracellular molecular motor transport. These demonstrate the conceptual unity of the fundamental principles underlying the apparent diversity of the systems and the utility of the theoretical toolbox of non-equilibrium statistical mechanics in interdisciplinary research far beyond the traditional disciplinary boundaries of physics. Leading industry experts provide a broad overview of the interdisciplinary nature of physics Presents unified descriptions of intracellular, ant, and vehicular traffic from a physics point of view Applies theoretical methods in practical everyday situations Reference and guide for physicists, engineers and graduate students

"La frontera...I heard it for the first time back in the late 1940s when Papa and Mama told me and Roberto, my older brother, that someday we would take a long trip north, cross la frontera, enter California, and leave our poverty behind." So begins this honest and powerful account of a family's journey to the fields of California -- to a life of constant moving, from strawberry fields to cotton fields, from tent cities to one-room shacks, from picking grapes to topping carrots and thinning lettuce. Seen through the eyes of a boy who longs for an education and the right to call one palce home, this is a story of survival, faith, and hope. It is a journey that will open readers' hearts and minds.
