Over the years, a large and growing literature on the economics of climate change has developed. Within this volume the contributors have included a wide range of journal essays that consider the impact of climate change on specific sectors; goods and services; the costs and benefits of greenhouse gas (GHG) mitigation; and policy design for mitigation, including both domestic instruments and issues related to international agreements.

This book constitutes the revised post-conference proceedings of the 16th European Conference on Multi-Agent Systems, EUMAS 2018, held at Bergen, Norway, in

December 2018. The 18 full papers presented in this volume were carefully reviewed and selected from a total of 34 submissions. The papers report on both early and mature research and cover a wide range of topics in the field of multi-agent systems.

I have three reasons for bringing out the ensuing collection of essays. First, since analysis without measurement (this is generally not the same thing as what is commonly referred to as "qualitative methods" or "qualitative research" in the social science literature) is a relatively new scholarly endeavor, I am striving to enhance its visibility by attracting a wider audience than what would normally be possible with single, narrowly-focused essays published in scattered journals. Second, several of these essays may, in the minds of potential readers, appear to have been published in places that, if not obscure, are at least inconvenient to locate. Collecting them in a single anthology, then, will help to increase their accessibility. Third, I am trying to suggest, as strongly as I can, that analysis without measurement is a viable intellectual enterprise that ought to be taken seriously in social science. This last point will clearly be enhanced if the whole that follows turns out, as I hope and suspect it does, to be greater than the sum of its parts. All the same, each reader will have to judge for himself or herself the extent to which I have, through the present collection, successfully made the case for taking up analysis without measurement. The partitioning of these essays into two groups is somewhat, though by no means completely arbitrary.

Follow Neal Schaffer's advice, and you'll be able to do it yourself—and do it right.

Makes Japanese sources accessible in English Although much of the work on Japanese economic history is inaccessible to Westerners, many of Japan's leading economic historians have published widely in English. Combined with the work of Western economists who can utilize Japanese-language sources, this series assembles a wide range of English-language articles on the key issues in Japanese economic development. Individual volumes cover the interwar period, postwar reconstruction and growth, the textile industry, demographics, agriculture, trade, and the rise of commerce and "protoindustry" in the Tokugawa era. An information-packed classroom and research resource An introductory essay in each volume discusses the significance of the articles, compares various economic development in

Japan with those in other countries, and puts studies in the context of similar studies in Europe. A versatile research resource, this 7-volume set is a veritable gold mine of hard-to-find information and data from diverse sources and a godsend to everyone interested in comparative economic and social history. Professors will appreciate the collection because it gives them instant access to less familiar English-language sources and is an easy way to introduce students to doing their own research. Students will appreciate the many articles as a mother lode of information for reports and papers. Researchers will be pleased by the coverage of more than three centuries of Japanese history and life.

This book constitutes the refereed proceedings, presented on the 20th International Conference on Web Information Systems Engineering, WISE 2019 and on The International Workshop on Web Information Systems in the Era of AI, held in Hong Kong and Macau, China. Due to the problems in Hong Kong, WISE 2019 has been postponed until January 2020. The 7 workshop papers, 5 demo papers and 3 tutorial papers presented were carefully reviewed and selected from numerous submissions. The papers are organized in the following sections: tutorials; demos; the International Workshop on Web Information Systems in the Era of AI.

We generate and gather a lot of data about ourselves and others, some of it highly confidential. The collection, storage and use of this data is strictly regulated by laws, but restricting the use of data often limits the benefits which could be obtained from its analysis. Secure multi-party computation (SMC), a cryptographic technology, makes it possible to execute specific programs on confidential data while ensuring that no other sensitive information from the data is leaked. SMC has been the subject of academic study

For more than 30 years, but first attempts to use it for actual computations in the early 2000s – although theoretically efficient – were initially not practicable. However, improvements in the situation have made possible the secure solving of even relatively large computational tasks. This book describes how many different computational tasks can be solved securely, yet efficiently. It describes how protocols can be combined to larger applications, and how the security-efficiency trade-offs of different components of an SMC application should be chosen. Many of the results described in this book were achieved as part of the project Usable and Efficient Secure Multi-party Computation (UaESMC), which was funded by the European Commission. The book will be of interest to all those whose work involves the secure analysis of confidential data.

Robert Solow has made a significant contribution in the field of aggregative economics. This volume should be an important starting point for any researcher or professional economist seeking to understand how this branch of economics advanced in the 20th century.
