Infectious disease (ID) is a constant concern for pharmacy clinicians, with far too few specialists to meet the demand. facto ID specialists. Further, treatment of infectious disease involves a good deal of grey area, which means that even the experts need a way to verify their mastery. Now, *Infectious Disease Pharmacotherapy Self Assessment*, by Lea Eiland and Diane Ginsburg, bring you thorough and relevant cases where questions are delivered with varying degrees of difficulty, allowing you to truly gauge your level of understanding of complex ID pharmacotherapy problems. Three levels of difficulty offers users a way to assess their mastery of ID topics.

The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor countries. More recently, negligent production at a Massachusetts compounding pharmacy sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property concerns. Countering the Problem of Falsified and Substandard Drugs accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt with by courts, case by case, the report does not discuss the problem of counterfeit medicines.
