Modified atmosphere packaging (MAP) has proved to be one of the most significant and innovative growth areas in retail food packaging of the past two decades. Bulk modified atmosphere packs have been an accepted form of packaging for meat and poultry in the USA since the early 1970s, but MAP is only now of being widely adopted. Today there is a substantial wholesale on the verge market for bulk packaged fresh vegetables and fruit, and the most significant retail MAP products are fresh pasta, pre-cooked poultry and sausage, and biscuits (a unique American product). The

Read Online Carrier Flowtronic Troubleshooting

United Kingdom is the biggest single market for the modified atmosphere packaging of fresh chilled food products, accounting for about half of the total European market. A further quarter is represented by France. The success of MAP in both the British and French markets can be attributed to the large, highly sophisticated food retailing multiples and dense populations existing in both countries.

Modified atmosphere packaging may be defined as an active packaging method in which an altered atmosphere is created in the headspace that retards chemical deterioration while simultaneously retarding growth of spoilage organisms. Shelf lives of

Read Online Carrier Flowtronic Troubleshooting

perishable products, such as dairy products, meat, poultry, fish, fruits and vegetables, and bakery items are limited by biochemical changes in the product catalysed by exposure to the normal atmosphere (21 % oxygen, 78% nitrogen and less than 0. 1 % carbon dioxide) and growth of spoilage organisms. Modification of the atmosphere within a package containing these products helps to better maintain the quality of the food under longer storage conditions and retards the growth of undesirable organisms. Of course, deterioration is also slowed by chilling, which is required for the transport to market of highly perishable items like meat, poultry and fish that would either spoil or have the

Read Online Carrier Flowtronic Troubleshooting

potential for contamination by certain food pathogens. Chilling plus a modification of the atmosphere optimizes the keeping quality of food. Modification of the atmosphere has been known for over a century as a means of food preservation and has become a very popular means of food preservation in the latter part of the 20th century. Modified atmosphere packaging (MAP) is practised extensively in Europe, Canada and the US. Both vacuum packaging (removal of air from the package) and addition of gases within the package are considered MAP.

Cerebral vasospasm remains a major clinical problem in patients with subarachnoid hemorrhage.

Read Online Carrier Flowtronic Troubleshooting

Neuroprotection with calcium antagonists, hemodynamic therapy and interventional angioplasty have an established role in the management of this disease, but an effective single drug for prevention or treatment of the vasospasm is still lacking. This book contains selected contributions to the 7th International Conference on Cerebral Vasospasm held in Interlaken, Switzerland, in June 2000. Part I of the book concentrates on basic science and experimental vasospasm. The molecular biology of vasospasm, the role of endothelin and nitric oxide as well as the potential of gene therapy are presented. Part II concentrates on the diagnosis and therapy of clinical vasospasm.

Read Online Carrier Flowtronic Troubleshooting

New diagnostic tools are presented, including diffusion and perfusion-weighted MRI, MR spectroscopy and microdialysis with metabolic monitoring. Leaders in the field discuss the current indications and results of endovascular treatment of cerebral vasospasm. The latter chapters are devoted to the treatment of clinical vasospasm with new drugs and to the prevention and treatment of ischemic deficits with neuroprotective drugs and hemodynamic therapy. The book provides the state-of-the-art in the major subjects of the molecular biology of vasoconstriction and experimental vasospasm as well as the diagnosis and treatment of clinical vasospasm.
