The collaborative or co-management of natural resources - whether between states and local communities or amongst and within communities themselves - is a process of collective understanding and actions to bring about negotiated agreements on roles, rights and responsibilities for decentralized governance of natural resources. At heart, co-management is about sharing power, one of the most difficult but rewarding experiences in personal and social life. The book is designed for professionals and people involved in practical co-management processes, and distils a wealth of experience and innovative approaches learned by doing. It begins by offering a variety of vistas, from historical analyses to a clear grasp of key concepts. Illustrated in detail is the understanding

accumulated in recent decades on starting points for co-management, conditions and methods for successful negotiations, ideas to manage conflicts and types of agreements and co-management institutions emerging from the negotiation tables. Simple tools, such as checklists distilled from different situations and contexts, are offered throughout. Examples and insights from experience highlight the importance of participatory democracy - the enabling contexts where sharing power is ultimately possible and successful. Published with IIED and IUCN.

Social Network Analysis (SNA), a quantitative approach to the study of social relations, has recently emerged as a key tool for understanding the governance of natural resources. Bringing together contributions from a range of researchers in the field, this

is the first book to fully explore the potential applications of SNA in the context of natural resource management. Topics covered include the role of SNA in stakeholder selection; improving fisheries management and conservation; the effect of social network ties on public satisfaction and agrarian communication networks.

Numerous case studies link SNA concepts to the theories underlying natural resource governance, such as social learning, adaptive co-management and social movements theory. Reflecting on the challenges and opportunities associated with this evolving field, this is an ideal resource for students and researchers involved in many areas of natural resource management, environmental biology, sustainability science and sociology.

The developing world OCOs poorest people live in marginal, often harsh rural environments. The natural resource base tends to be fragile and highly vulnerable to over exploitation. Yet these rural people depend directly on access to the food, forage, fuel, fibre, water, medicines, and building materials provided by local ecosystems. What types of natural resource management (NRM) can improve the livelihoods of these poor people while protecting or enhancing the natural resource base they depend on? New approaches to NRM are needed OCo ones that move beyond the earlier narrow focus on productivity (such as crop yields), to include social, institutional, and policy considerations."

reshaping environmental governance. Meanwhile, ideas about collaboration and learning are converging around the idea of adaptive co-management. This book provides a comprehensive synthesis of the core concepts, strategies, and tools in this emerging field, informed by a diverse group of researchers and practitioners with over two decades of experience. It also offers a diverse set of case studies that reveal the challenges and implications of adaptive co-management thinking.

As more companies shift their operations between countries to take advantage of lower costs and greater profit, the global market continues to change rapidly, resulting in global hypercompetition that can be detrimental to a business. Firms must remain updated with the latest research as they navigate cultural differences,

- One of the few studies focusing on co-management of natural resources (as opposed to general environmental issues). - This approach to environmental management is rapidly becoming popular in Asia. Co-management, that is the sharing of responsibilities between governmental institutions and groups of resource users, is rapidly becoming popular in Asia. In many countries environmental management is reformulated from exclusive state control to various kinds of joint management in which local communities, indigenous peoples and non-governmental organizations share authority and benefits with
