This book explains the role of formal labour market institutions in keeping the labour utilisation in Central and Eastern Europe above the level characteristic for Western European states. It provides an innovative and enriching take on labour utilisation at large and how various formal labour market institutions can affect the ongoing trend in labour utilisation in a way that is not covered by the extant literature. The impact of labour market institutions on labour market outcomes is analysed throughout 12 chapters, both from a cross-country perspective and in detailed case-studies, by 21 labour market experts from various CEE countries. Most chapters are based on empirical methods yet are presented in an easy-to-follow way in order to make the book also accessible for a non-scientific audience. The volume explores three key questions: How can labour utilisation be increased by labour market institutions? Which CEE countries managed to create a labour market institutional framework beneficial for labour utilisation? How should the labour market institutions in CEE countries be reformed in order to increase labour utilisation? The book argues that the legacy of transition reforms and a centrally planned past is still relevant in explaining common patterns among CEE countries and concludes that increasing the stock of skills accumulated by the employed and improving utilisation of these skills seems to be the first-best solution to increase labour utilisation. The book will be of interest to post-graduate researchers and academics in the fields of labour economics, regional economics, and macroeconomics as well as scholars interested in adopting an institutional analysis approach. Additionally, due to the broader policy implications of the topic, the book will appeal to policymakers and experts interested in labour economics.

High Risk Pregnancy examines the full range of challenges in general obstetrics, medical complications of pregnancy, prenatal diagnosis, fetal disease, and management of labor and delivery. Drs. David James, Philip J. Steer, Carl P. Weiner, Bernard Gonik, Caroline Crowther, and Stephen Robson present an evidence-based approach to the available management options, equipping you with the most appropriate strategy for each patient. This comprehensive reference features the fully searchable text online at [www.expertconsult.com](http://www.expertconsult.com), as well as more than 100 videos of imaging and monitoring. giving you easy access to the resources you need to manage high risk pregnancies. Prepare for clinical challenges and save time in addressing them thanks to expert advice on treatment options from international contributors. Find and

apply the information you need quickly and easily through a consistent organization and at-a-glance summary boxes that discuss evidence-based management options. Access the fully searchable text online at [www.expertconsult.com](http://www.expertconsult.com), along with links to Medline. View over 140 videos of detailed fetal imaging and monitoring that aid in diagnoses. Tap into recent developments in treatment and management in four new chapters—Global Maternal & Perinatal Health Issues; Recurrent Pregnancy Loss; Surveillance of the Fetus and its Indications; and Training for Obstetric Emergencies. Apply new evidence-based management options to treat genetic and constitutional factors leading to a high-risk pregnancy (such as diabetes, obesity, hypertension, and cardiac disease) through new and expanded coverage of these increasingly common presentations. Reference pregnancy-relevant laboratory values with an updated and comprehensive appendix on "Normal Values in Pregnancy." Effectively manage patients newly diagnosed with hematologic and immunologic malignancies, and explore the available drug options. Confirm your diagnoses with greater confidence thanks to full-color images throughout the text.

This book is the first of a new series which will present the proceedings of the newly established Nestlé Nutrition Workshop Series: Clinical & Performance Programme aimed at adult nutrition. Undernutrition is a common phenomenon in elderly people, and malnutrition reaches significant levels in those being in hospital, nursing homes or home care programs. Consequences of malnutrition often go unrecognised owing to the lack of specific validated instruments to assess nutritional status in frail elderly persons. The Mini Nutritional Assessment (MNA) provides a single, rapid assessment of nutritional status in the elderly of different degrees of independence, allowing the prevalence of protein-energy malnutrition to be determined and to evaluate the efficacy of nutritional intervention and strategies. Easy, quick and economical to perform, it enables staff to check the nutritional status of elderly people when they enter hospitals or institutions and to monitor changes occurring during their stay. Moreover, the MNA is predictive of the cost of care and length of stay in hospital. This publication will be of immense assistance to heads of geriatric teaching units, teachers in nutrition, clinicians general practitioners and dieticians, enabling them to better detect, recognise and start treatment of malnutrition in the elderly.

This is a comprehensive text on the methods - dietary, anthropometric, laboratory and clinical - of assessing the nutritional status of populations and of individuals in the hospital or the community. This Second Edition incorporates recent data from national nutritional surveys in the US and Europe; the flood of new information about iron, vitamin A and iodine; the role of folate in preventing neural tube defects; the use of HPLC techniques and enzyme assays; improvements in data handling; and many other developments. A paperback edition of this book is available to readers living outside of North America and Europe. Interested parties should contact the author at: [rsgibson@nutrition.earthlight.co.nz](mailto:rsgibson@nutrition.earthlight.co.nz) <http://nutrition.earthlight.co.nz>

His most recent book, "The Miracle of Fruits", is intended to enlighten the readers of all ages the benefits of including several servings of fruits in their daily diets. Furthermore, it explains the use of fruits as natural means to prevent and cure chronic diseases, such as Alzheimer's disease, anemia, arthritis, asthma, bowel movement, cancers, depression, diabetes, erectile dysfunction, heart diseases, indigestion, osteoporosis, premenstrual and postmenopausal symptoms, stroke, ulcer, vision disorders and weight control and how to boost immunity and derive quick source of energy.

Production and utilization. Structure and gross composition of the rice grain. Chemical constituents. Nutritive value of rice and rice diets. Processing. Grain quality evaluation. Varietal quality types. Processed products. Bran. Hull and straw.

Provides science-based advice to promote health and to reduce risk for major chronic diseases through diet and physical activity. Oriented toward policymakers, nutrition educators, nutritionists, and healthcare providers. Summarizes and synthesizes knowledge regarding individual nutrients and food components into recommendations for a pattern of eating that can be adopted by the public. Key Recommendations are grouped under nine inter-related focus areas. Agriculture Dept. (U.S.) Publicaiton: Home and Garden Bulletin No. 232 Health and Human Services Dept. (U.S.) Publication No. HHS-ODPHP-2005-01-DGA-A

Includes full contents of the paperback edition, plus lengthy appendixes

During the last decade the food and nutrition situation in developing countries has changed dramatically. For better or worse, urbanization and globalization have altered the diet and nutrition in both rural and urban areas. In many developing countries a persistent level of under nutrition exists both in rural areas and in urban slums due to less access to food needed for an active and healthy life. On the other hand, over-nutrition, or eating too much, has emerged among the middle-income groups. It is essential to have a better understanding of how people deal with their food in developing countries, in order to plan and implement food and nutrition programmes. This manual deals with the process of changing food habits and consumption patterns in developing countries. Nutritional implications, together with practical information is discussed in relationship to conducting field surveys. Part one of the manual provides insight into the dynamics of food habits and consumption and its socio-economic and cultural dimensions. Part two gives practical information on small scale surveys to be carried out within the framework of a nutrition issue; including data collecting on food habits and the measurement of food intake. This manual addresses professionals with practical or academic training and those who are involved in various types of food and nutrition programmes or related activities. It can also be used as a handbook in food and nutrition training courses at higher and at academic level.
