Mimeographed. - Wesley Clair Mitchell: The Economic Scientist. Edited by Arthur F. Burns. New York: National Bureau of Economic Research, 1952. Pp. viii, 379. \$4.00.

Lionel Robbins's now famous lectures on the history of economic thought comprise one of the greatest accounts since World War II of the evolution of economic ideas. This volume represents the first time those lectures have been published. Lord Robbins (1898-1984) was a remarkably accomplished thinker, writer, and public figure. He made important contributions to economic theory, methodology, and policy analysis, directed the economic section of Winston Churchill's War Cabinet, and served as chairman of the Financial Times. As a historian of economic ideas, he ranks with Joseph Schumpeter and Jacob Viner as one of the foremost scholars of the century. These lectures, delivered at the London School of Economics between 1979 and 1981 and tape-recorded by Robbins's grandson, display his mastery of the intellectual history of economics, his infectious enthusiasm for the subject, and his eloquence and incisive wit. They cover a broad chronological range, beginning with Plato, Aristotle, and Aquinas, focusing extensively on Adam Smith, Thomas Malthus and the classicals, and finishing with a discussion of moderns and marginalists from Marx to Alfred Marshall. Robbins takes a varied and inclusive approach to intellectual history. As he says in his first lecture: "I shall go my own sweet way--sometimes talk about doctrine, sometimes talk about persons, sometimes talk about periods." The lectures are united by Robbins's conviction that it is impossible to understand adequately contemporary institutions and social sciences without understanding the ideas behind their development. Authoritative yet accessible, combining the immediacy of the spoken word with Robbins's exceptional talent for clear, well-organized exposition, this volume will be welcomed by anyone interested in the intellectual origins of the modern world.

This new reader in the history of economic thought is edited by two of the most respected figures in the field. With clearly written summaries putting each selection into context, this book will be of great use to students and lecturers of the history of economic thought as it goes beyond the simple reprinting of articles. Selections and discussions include such thinkers as Aristotle, John Locke, François Quesnay, David Hume, Jean-Baptiste Say, Karl Marx, William Stanley Jevons, Irving Fisher and Thorstein Veblen. The History of Economic Thought: A Reader can be used as a core textbook or as a

supplementary text on courses in economic thought and philosophy, and will provide readers with a good foundation in the different schools of thought that run through economics.

This book describes the history of economic thought, focusing on the development of economic theory from Adam Smith's 'Wealth of Nations' to the late twentieth century. The text concentrates on the most important figures in the history of the economics. The book examines how important economists have reflected on the sometimes conflicting goals of efficient resource use and socially acceptable income distribution.--[book cover].

Contains five sets of lectures taken by Glenn Johnson as a doctoral student in economics at the University of Chicago during 1946-7. This volume also includes notes by Mark Ladenson at Northwestern and from a faculty seminar at MSU on comparative method.

Originally published in 1939, this volume contains an inaugural lecture delivered by M. M. Postan at the University of Cambridge.

Roger E. Backhouse and Keith Tribe present a broad introduction to the history of economic thought that provides much-needed context behind the development of ideas and a guide through the original writings of major economists. They seek to emphasize a diversity that is sometimes suppressed in more conventional textbooks.

From the ancients to the moderns, questions of economic theory and policy have been an important part of intellectual and public debate, engaging the attention of some of history's greatest minds. This book brings together readings from more than two thousand years of writings on economic subjects. Through these selections, the reader can see first-hand how the great minds of past grappled with some of the central social and economic issues of their times and, in the process, enhanced our understanding of how economic systems function. This collection of readings covers the major themes that have preoccupied economic thinkers throughout the ages, including price determination and the underpinnings of the market system, monetary theory and policy, international trade and finance, income distribution, and the appropriate role for government within the economic system. These ideas unfold, develop, and change course over time at the hands of scholars such as Aristotle, St. Thomas Aquinas, John Locke, François Quesnay, David Hume, Adam Smith, Thomas Robert Malthus, David Ricardo, John Stuart Mill, Karl Marx, William Stanley Jevons, Alfred Marshall, Irving Fisher, Thorstein Veblen, John Maynard Keynes, Milton Friedman, and Paul Samuelson. Each reading has been selected with a view to both enlightening the reader as to the major contributions of the author in question and to giving the reader a broad view of the development of economic thought and analysis over time. This book will be useful for students, scholars, and lay people with an interest in the history of economic thought and the history of ideas generally.

Contains seven documents from the history of economics: four sets of lecture notes taken by Victor E Smith, two from courses given by William Jaffe at Northwestern University, on general equilibrium theory and on Keynes, from 1938-39, and one from lectures given at the University of Cambridge during 1954-55.

This book contains a set of notes prepared by Ragnar Frisch for a lecture series that he delivered at Yale University in 1930. The lecture notes provide not only a valuable source document for the history of econometrics, but also a more systematic introduction to some of Frisch's key methodological ideas than his other works so far published in various media for the econometrics community. In particular, these notes contain a number of prescient ideas precursory to some of the most important notions developed in econometrics during the 1970s and 1980s More remarkably, Frisch demonstrated a deep understanding of what econometric or statistical analysis could achieve under the situation where there lacked known correct theoretical models. This volume has been rigorously edited and comes with an introductory essay from Olav Bjerkholt and Duo Qin placing the notes in their historical context.
