Expands on the original work that first introduced artists and artisans to the materials, tools and techniques used to create original wax models for jewelry - both fine pieces and costume jewelry. The ancient method of lost-wax casting and traditional casting techniques of modeling in wax free that artist from many of the restrictions of traditional wax modeling, to provide greater freedom and spontaneity in creation, along with a newly achieved speed in execution. &#x26;#x26;The author combines this understanding of the methods with his own practical experience to present the techniques in a concise, step-by-step format. He details the necessary materials and tools, and introduces the reader to their various characteristics and their roles in the jewelry-making process. He guides the artist through the various processes of wax modeling in several projects.

In this book jewelry wax modeling techniques are introduced and explained in detail, illustrated with step-by-step photographs. The purpose of introducing these techniques is threefold: 1) To assist jewelry designers. 2) To offer readily usable ideas for those already involved in the production of jewelry. 3) To offer progressive techniques that may be useful well into the future. The special features of this book include practical applications when using a variety of waxes, mitsuro and its uses, demonstrations of a variety of textures, and methodology of finishing castings.This book, as well as Basic Wax Modeling, was written as part of the curriculum for the Lost Wax Courses of the Japan Jewelry Craft School. The school, based on a longstanding practice of quality in its curriculum, has raised the role and recognition of wax modeling in the production of jewelry and has been instrumental in the nurturing of a large number of jewelry designers/modelers.Practical Wax Modeling was written as an applied compilation for the book Basic Wax Modeling. Various tools, waxes and their uses, basic wax techniques, etc, were introduced in Basic Wax Modeling so this book does not cover those subjects again. We recommend that the uninitiated learning wax modeling read Basic Wax Modeling together with this book. Getting you acquainted with the entire wax modeling spectrum through these books has been our objective. The book contains 385 detailed photos and illustrations. Projects include hard wax modeling, soft wax modeling, modeling with gemstones, and many other techniques. This new edition includes two new chapters: Casting Processes & Rubber Mold Making, and Processing & Finishing after Casting.

Mr. Hiroshi Tsuyuki, the Japanese authority on Jewelry Wax Modeling, uses an innovative approach to teaching the technique of wax modeling. Often a process is easier shown than described in so many words. This book was conceived through the author's teaching experience -- more photos and sketches and less text resulting in less over-the-shoulder supervision. By introducing new techniques in each project, his students were able to progress more rapidly towards independence in design concepts. While preparing a model for casting and the actual casting process are adequately explained in most casting books, very little space is devoted to the design and creation of wax models. Mr. Tsuyuki presents 11 basic projects in this book, each one designed to teach the use of certain tools and types of waxes in a progressive manner as one's skills improve. Each step of every project is accompanied by a photo and text and in some cases supplementary sketches and notes are provided to clarify those particular processes. Paying careful attention to the photos, noting the demonstrator's hand position and the type of tool being used, eliminates any confusion which may result from the text. After each basic model is completed the author offers a number of sketches suggesting design possibilities using the techniques learned in the construction of the basic model. Mr. Tsuyuki states that by conscientiously completing each project, the student should be well on the way to becoming a designer/modeler. This book is 112 pages and has 283 photos and illustrations.

This book is a basic introduction to lost-wax casting with emphasis on jewelry making. It is designed to be used both as a textbook and a reference book and is directed primarily at beginners. Experienced casters, however, will probably find some useful ideas; they may even find some new techniques. Heavy emphasis is placed upon understanding why things are done in a particular way, rather than simply presenting a set of cookbook rules that will always work. The book is also available in a 8.5x11 inch comb-bound version for use in the shop or classroom. See ISBN 0-9679600-1-0.

Wax carving is like sculpture for jewellery and allows enormous creativity, as so many different forms can be made. This practical guide introduces the techniques to this age-old method through a series of guided exercises and projects, and demonstrates how exciting it can be. Drawing on the experience of two master wax-carvers, it also gives invaluable advice on the finish of your cast pieces and how to reproduce them. With over 400 colour photos, it give advice on setting up for wax carving, tools, tool-making and materials. There are exercises that introduce the beginner to using wax and then build ideas and confidence to try more complex designs. Included are advanced techniques that show how to use stones in a carving and how to add texture and surface detail. Finally, finished examples demonstrate the potential, excitement and versatility of the method.

Expanded edition of this excellent textbook about lost wax models, investing, burnout and other procedures. Clear descriptions with hundreds of drawings of small scale casting.
