This volume explores the dynamics of myths throughout time and space, along with the mythmaking processes in various cultures, literatures and languages, in a wide range of fields, ranging from cultural studies to the history of art. The papers brought together here are motivated by two basic questions: How are myths made in diverse cultures and literatures? And, do all different cultures have different myths to be told in their artistic pursuits? To examine these questions, the book offers a wide array of articles by contributors from various cultures which focus on theory, history, space/ place, philosophy, literature, language, gender, and storytelling. Mythmaking across Boundaries not only brings together classical myths, but also contemporary constructions and reconstructions through different cultural perspectives by transcending boundaries. Using a wide spectrum of perspectives, this volume, instead of emphasising the different modes of the mythmaking process, connects numerous perceptions of mythmaking and investigates diversities among cultures, languages and literatures, viewing them as a unified whole. As the essays reflect on both academic and popular texts, the book will be useful to scholars and students, as well as the general reader.

People have dreamed of machines, which would free them from unpleasant, dull, dirty and dangerous tasks and work for them as servants, for centuries if not millennia. Service robots seem to finally let these dreams come true. But where are all these robots that eventually serve us all day long, day for day? A few service robots have entered the market: domestic and professional cleaning robots, lawnmowers,

milking robots, or entertainment robots. Some of these robots look more like toys or gadgets rather than real robots. But where is the rest? This is a question, which is asked not only by customers, but also by service providers, care organizations, politicians, and funding agencies. The answer is not very satisfying. Today's service robots have their problems operating in everyday environments. This is by far more challenging than operating an industrial robot behind a fence. There is a comprehensive list of technical and scientific problems, which still need to be solved. To advance the state of the art in service robotics towards robots, which are capable of operating in an everyday environment, was the major objective of the DESIRE project (Deutsche Service Robotik Initiative – Germany Service Robotics Initiative) funded by the German Ministry of Education and Research (BMBF) under grant no. 01IME01A. This book offers a sample of the results achieved in DESIRE.

Perfect for Star Wars fans who think they already know everything On May 25, 1977, the world of science fiction, film, and pop culture was changed forever with the release of Star Wars. The beginning of this epic space opera franchise would inspire an expanded universe of creativity, including books, comic books, theme parks, and much more. With extensive back stories, lore, and author Dan Casey's encyclopedic knowledge on the subject, this lively, detailed book explores the characters, storylines, and facts every true Star Wars fan should know. This guide covers the history of how a multibillion-dollar and beloved institution was born and went on to flourish. Dan Casey has collected every essential piece of Star Wars knowledge and trivia, including what infamous, cult classic TV movie introduced beloved bounty hunter Boba Fett, what Star Wars novel was released in 1976 before the first movie premiered, and what animal species is named after Han Solo. Whether you're a fan of the original film trilogy, an avid reader of the books, or can't wait to see what J. J. Abrams does with the next generation of movies, 100 Things Star Wars Fans Should Know & Do Before They Die is the perfect resource for all Star Wars fans looking to increase their knowledge of the storied franchise and look back on the most memorable moments of a galaxy "far, far away."

This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge, information, and data-processing systems of all kinds, no matter whether human, (other) animal, or machine. Its scope is intended to span the full range of interest from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology (concerning the mental powers of other species) to ideas related to artificial intelligence and computer science. While primary emphasis will be placed upon theoretical, conceptual, and epistemological aspects of these problems and domains, empirical, experimental, and methodological studies will also appear from time to time. The present volume reflects the kind of insights that can be obtained when research workers in philosophy, artificial intelligence, and computer science explore problems of common concern. The issues here tend to fall into two broad but varied sets, namely: those concerned with content and concepts, on the one hand, and those concerned with semantics and epistemology, on the other. The collection begins with a prologue that focuses upon the relations between connectionism and alternative conceptions of nativism and ends with an epilogue that examines the significance of alternative conceptions of the Frame Problem for artificial intelligence. Because these papers are rich and diverse, they ought to appeal to a wide and heterogeneous audience. J.H.F.

Robert M. Clark's *Intelligence Analysis: A Target-Centric Approach* demonstrates that a collaborative, target-centric approach leads to sharper and more effective analysis, while better meeting the needs of the customer. The book also accounts for recent events such as the rise of ISIL and the conflict in Ukraine, and contains new examples throughout. Clark's practical information and insider perspective create the perfect resource for students and practitioners alike.

(FAQ). Many science fiction movies from the last 40 years have blazed new vistas for viewers. They've reached further into the future, traveled longer into the past, soared deeper into the vastness of the cosmos, and probed more intently inside man's consciousness than any other period of film before. And audiences ate them up, taking four of the top ten spots in all-time ticket sales in America while earning more than \$2 billion at the box office. *Modern Sci-Fi Films FAQ* takes a look at the genre's movies from the last 40 years, where the dreams of yesterday and today may become tomorrow's realities. This FAQ travels to a long time ago, in a galaxy far, far away... visits a theme park where DNA-created dinosaurs roam... watches as aliens come to Earth, hunting humans for sport... and much, much more. Filled with biographies, synopses, production stories, and images and illustrations many seldom seen in print the book focuses on films that give audiences two hours where they can forget about their troubles, sit back, crunch some popcorn, and visit worlds never before seen... worlds of robots, time travel, aliens, space exploration, and other far-out ideas.
