Quattroruote (four-wheel drive) is a system that allows a vehicle to have power to all four wheels, increasing traction and stability in various driving conditions. It is commonly used in off-road vehicles, SUVs, and performance cars. There are different types of four-wheel drive systems, including full-time, part-time, and on-demand systems. The on-demand system, like the Quattroruote system used in many vehicles, typically uses a central differential and a transfer case to distribute power to the front or rear wheels as needed. This system is often found in performance-oriented vehicles and is designed to provide enhanced grip and control on both paved and unpaved surfaces.
