This book, Strategic Management of Technological Innovation, Sixth Edition is written for courses that may be called strategic management of technology and innovation, technology strategy, technology innovation, technology management, or for specialized new product development courses that focus on technology. The subject is approached as a strategic process, and as such, is organized to mirror the strategic management process used in most strategy textbooks, progressing from assessing the competitive dynamics of a situation, to strategy formulation, to strategy implementation. Highlights: 1. Complete Coverage for Both Business and Engineering Students 2. New Short Cases and New Indian Cases 3. Cases, Data, and Examples from around the World 4. More Comprehensive Coverage and Focus on Current Innovation Trends

A cool guide to help kids develop robots and electronics About This Book Get clearly-written code with descriptions and comments that explain each code section The book comes with separate code files, one entire program at a time, as well as many diagrams and separate downloadable files that contain colored photos explaining steps in the book Kids can build multiple projects during the course of the book; by the end, they will have working projects of their own Who This Book Is For This book is for children aged 9 and up, and their parents, who may or may not have a technical background. This book is tailored around the central idea of introducing electronics as a fun and a curiosity-inducing exercise. This book can act as a bonding exercise between parent and child over a single weekend. What You Will Learn Write simple programs using variables, functions, loops, arrays, and libraries Set up the Arduino and understand its internal functioning Get to grips with connections in electronics and arrive at ways to connect various components yourself Delve into various sensors and their selection and build your own sensor Unravel the concept of resistors and capacitors along with understanding the physics of electronics Become an inventor through interactive exercises (such as making a friend happy with a proximity sensor, and giving "life" to a plant) In Detail The mission of this book is to integrate technology with the tools that children already use for crafts so that they feel that the technology is an extension of their playtime. We use coding, sensors, and micro-controllers integrated with art and craft supplies, origami, and Playdough. There are 10 fun-filled chapters that talk to children directly, and give clear instructions for non-technical parents too. We use Arduino as the controller of choice due to its easy availability and large community. By the end of the book, children will comfortably be able to set up their Arduino, read and understand code, manipulate code, and ultimately write their own code for projects. They will also be able to use basic sensors and know how components connect to each other. All the learning takes place with lots of colorful pictures and the circuits are neatly presented using wiring. Style and approach This book will show you the glamour of common and easily available sensors, so that kids and parents waste no time searching for parts. We provide simple yet fun projects with step-by-step instructions that make it easy to get hands-on.

The volumes in this series include contemporary techniques significant to a particular branch of neuroscience. They are an invaluable aid to the student as well as the experienced researcher not only in developing protocols in neuroscience but in disciplines where research is becoming closely related to neuroscience. Each volume of Methods in Neurosciences contains an index, and each chapter includes references. Dr. Conn became Editor-in-Chief of the series beginning with Volume 15, so each subsequent volume could be guest-edited by an expert in that specific field. This further strengthens the depth of coverage in Methods in Neurosciences for students and researchers alike. Cloning Expression systems Signal transduction Structure-function techniques Antireceptor antibodies Regulation 3-D receptor modeling and computational probing

Consummate home cook and magazine editor Suzanne Gibbs shows us how to use a pressure cooker to create slow-cooked flavour in a fast-paced world. Pressure cookers allow us to cook quickly, cheaply and efficiently. The food is cooked in liquid at high temperatures, which shortens cooking time by up to 70 per cent. Because the method seals in flavour and nutrition, cheaper ingredients can be used to great effect. Here Suzanne selects more than 80 of her favourite pressure-cooker recipes, and describes the process from beginning to end. Learn how to cook an osso bucco in 25 minutes, a chicken tagine in 15 minutes and a delicious bread and butter pudding in 20 minutes. Packed with information on practicalities, such as choosing, using and cleaning your cooker, and fully illustrated with beautiful photography. The Pressure Cooker Recipe Book is a must-have guide for anyone balancing the constraints of time and money with a desire to create delicious healthy meals for themselves, their friends and their families.
