Surgilig AC Ligament. ' Surgilig ' was developed by the Nottingham Shoulder Unit and was first introduced in November 2001 as a method of addressing failed ACJ surgery but has gained popularity in the last three years as a primary method of stabilizing the disrupted ACJ. This artificial ligament provides a strong, flexible and permanent solution to AC Joint dislocations, with few complications to date.

The modern technique of interscalenic block was introduced by Winnie in 1970 and soon became the standard for anaesthesia and postoperative pain management of shoulder surgery. Requested surgical positioning (beach chair position) must be accurately followed by the anaesthetic staff to avoid hypotension and consequent brain hypoperfusion.

The indication for reverse shoulder arthroplasty (RSA) is most commonly rotator cuff disease in association with glenohumeral arthritis. Some surgeons recommend a superior approach when open surgery is used for rotator cuff repair, while others prefer an anterior deltopectoral approach, which saves the deltoid.
